

POS Action Panel Toggle

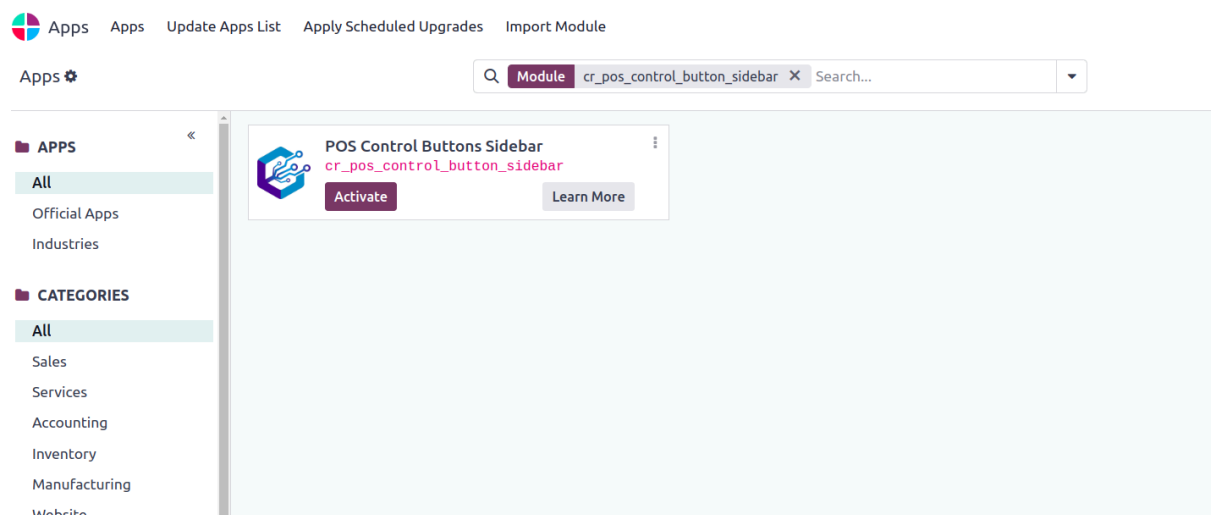

Module Name - cr_pos_control_button_sidebar

Branch Name - cr_pos_control_button_sidebar_18.0

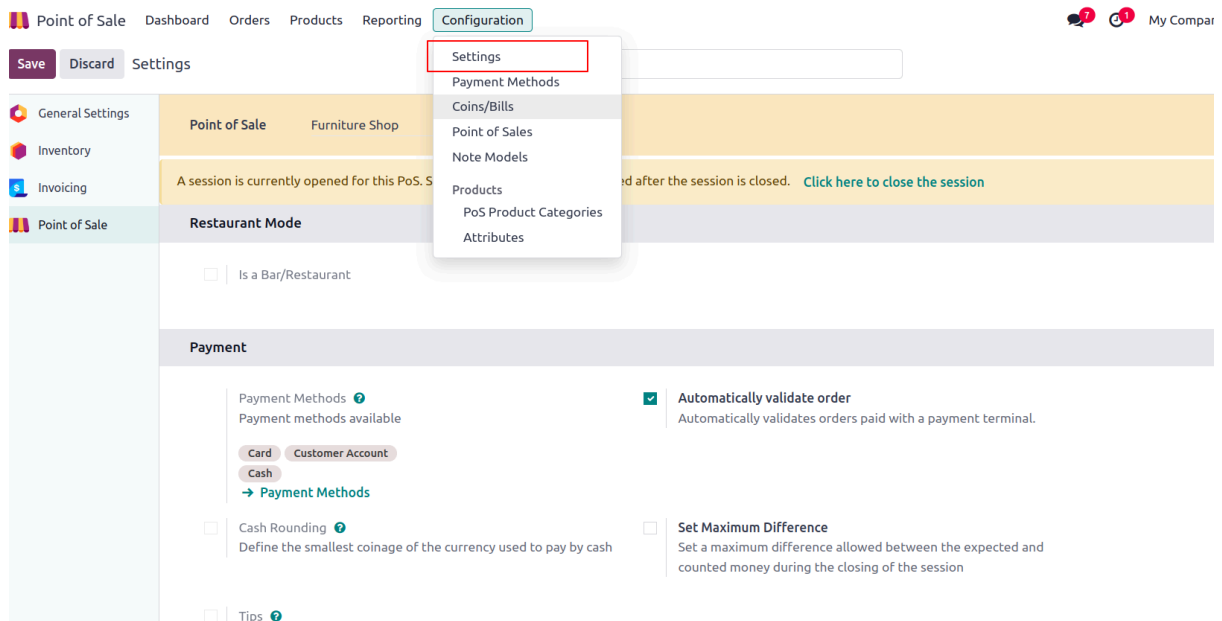

- This module provides a configuration option to display all action buttons within a collapsible sidebar, enhancing the Point of Sale interface
- Users can toggle the visibility of the control sidebar using a custom button, allowing for a cleaner and more organized layout.
- When enabled, the sidebar replaces the traditional placement of action buttons, offering a centralized and space-efficient solution.

Let's see how we can implement this feature in Odoo POS.

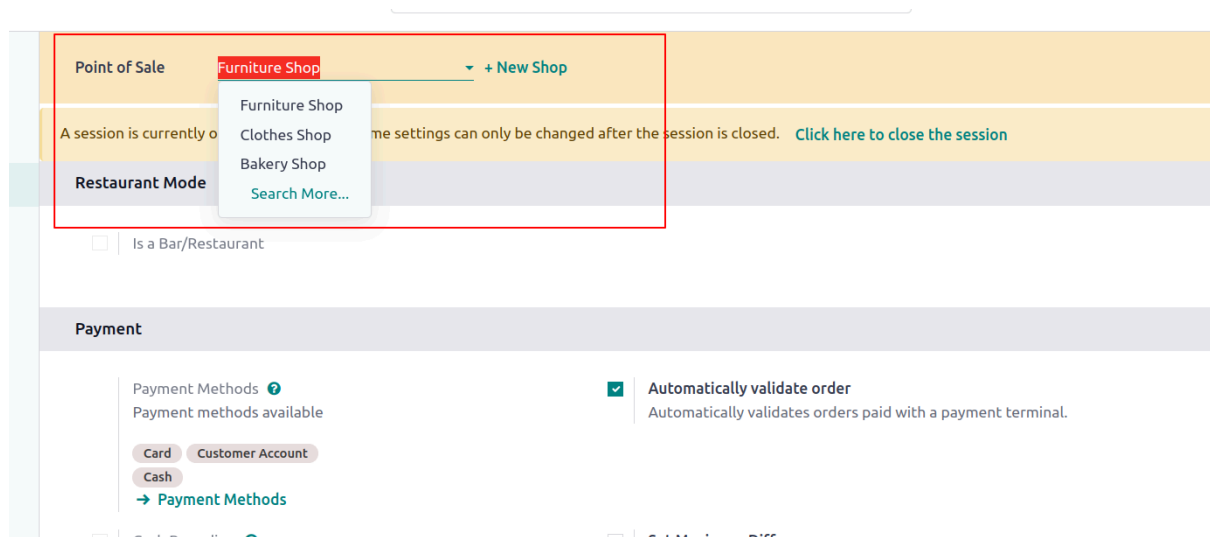

- First, go to the Apps menu, search for the cr_pos_control_button_sidebar module, and activate it.

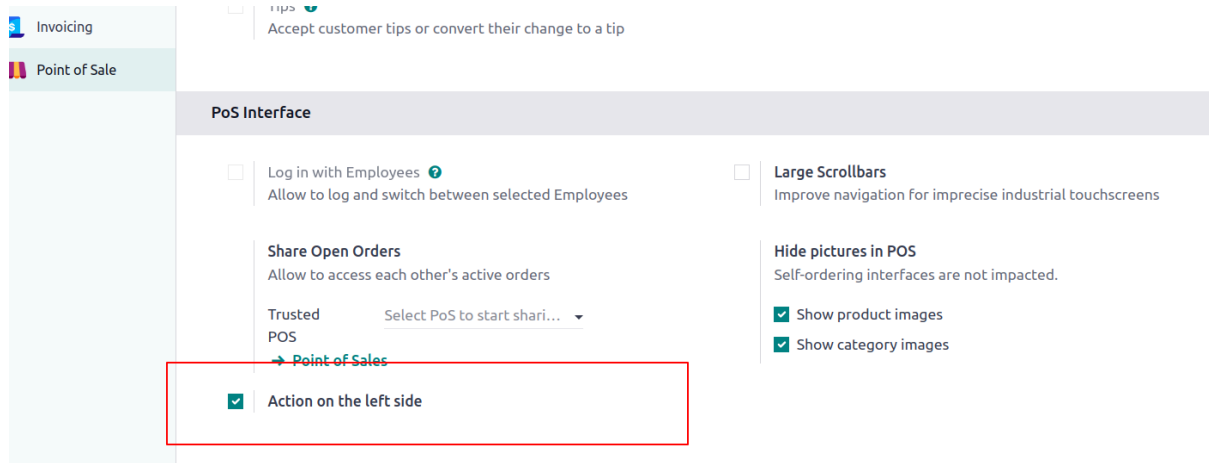

- Go to the Point of Sale menu, then navigate to Configuration, and under Configuration, select Settings.

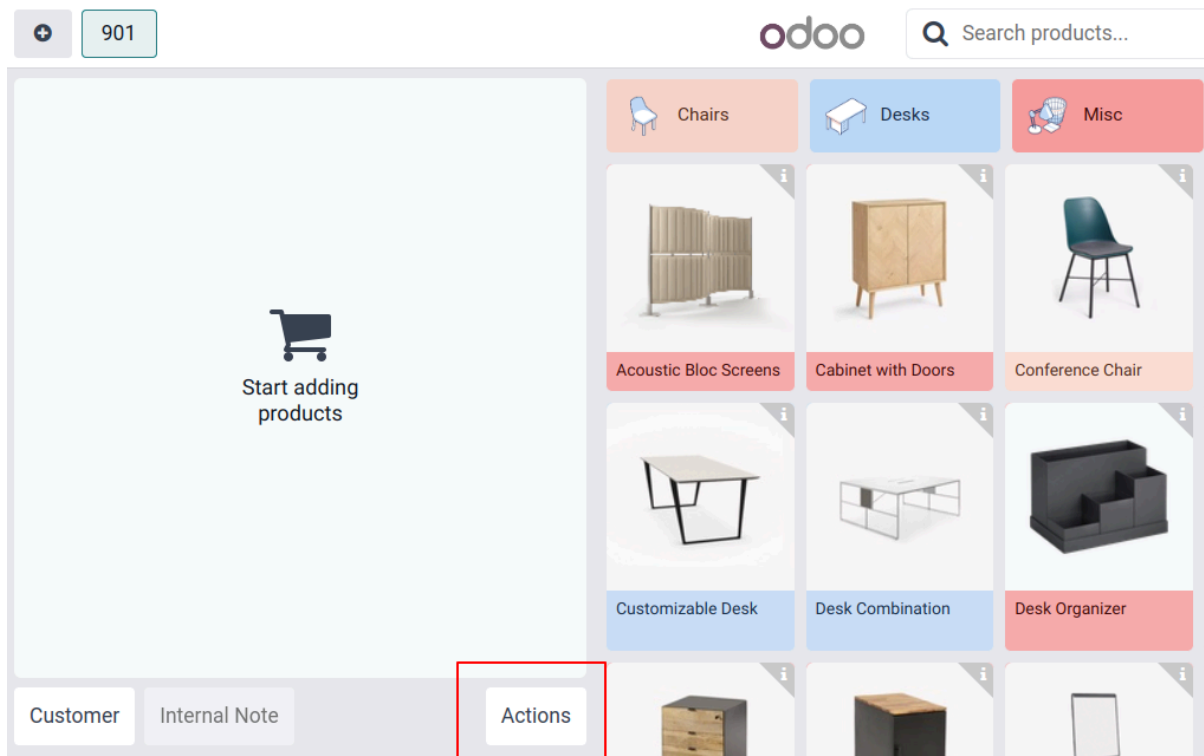

- You can select any POS shop for which you want to enable the feature.

- Under the POS Interface section, you will find a checkbox labeled "Action on the left side". You need to enable it and then save the changes.

- Go to the POS shop for which you have enabled the feature. You will notice that the action button is located at bottom.

- When you click on the Action , the sidebar will open, and you will see a list of action buttons. If you want to close the sidebar, you can click on the close button on the right-hand side of the sidebar.
