

# Table time counter in the POS

Module Name - lo\_pos\_table\_time\_counter

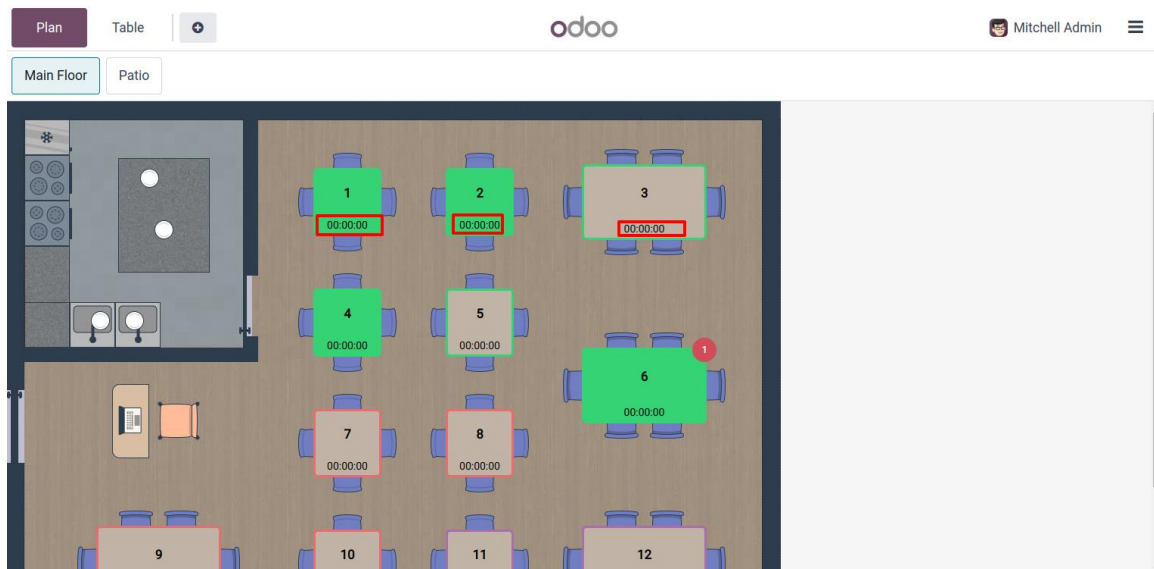

**Let's see how we can implement this feature in Odoo POS.**

- First, activate the cr\_pos\_table\_time\_counter module. Go to the Point of Sale menu, then navigate to Configuration, and under Configuration, select Settings.
- There will be a checkbox named **Table Time Counter Name**. You can enable this checkbox to track the time associated with the table or counter.

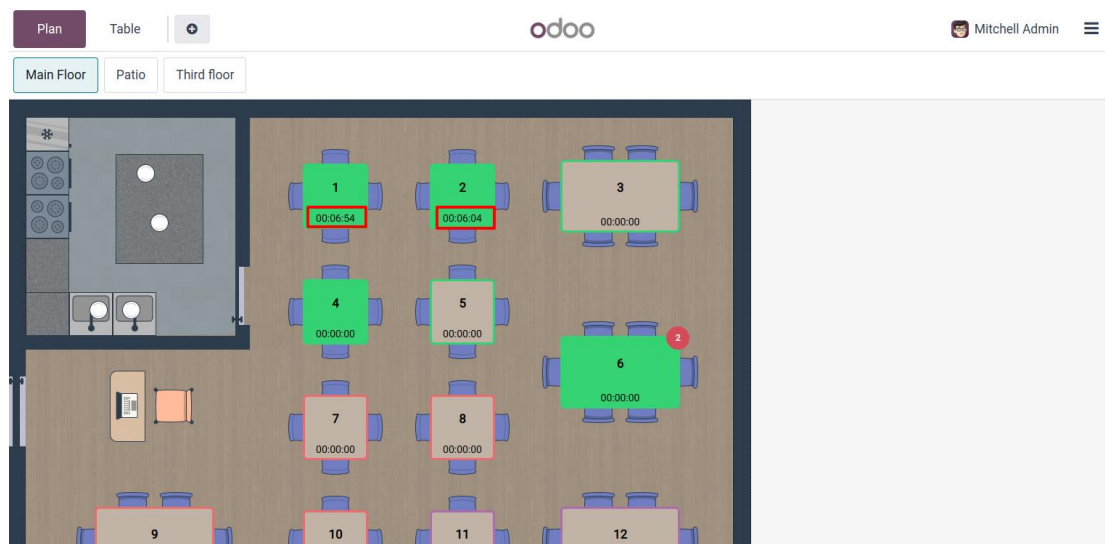

- Once you enable the **Table Time Counter** checkbox, you will be able to see the **time count**

- When you place the order, the **time counter** will start, and it will stop automatically once the payment is completed.

- Y
