Guest Details in POS

Module Name - lo_pos_guest_info

**Let's see how we can implement this feature in Odoo POS.**

- First, activate the cr_pos_guest_info module. Go to the Point of Sale menu, then navigate to Configuration, and under Configuration, select Settings.

- Here, you will see an option named **Guest Details**, which is only available for restaurants and bars. When you enable the **Guest Details** checkbox, two additional options will appear:
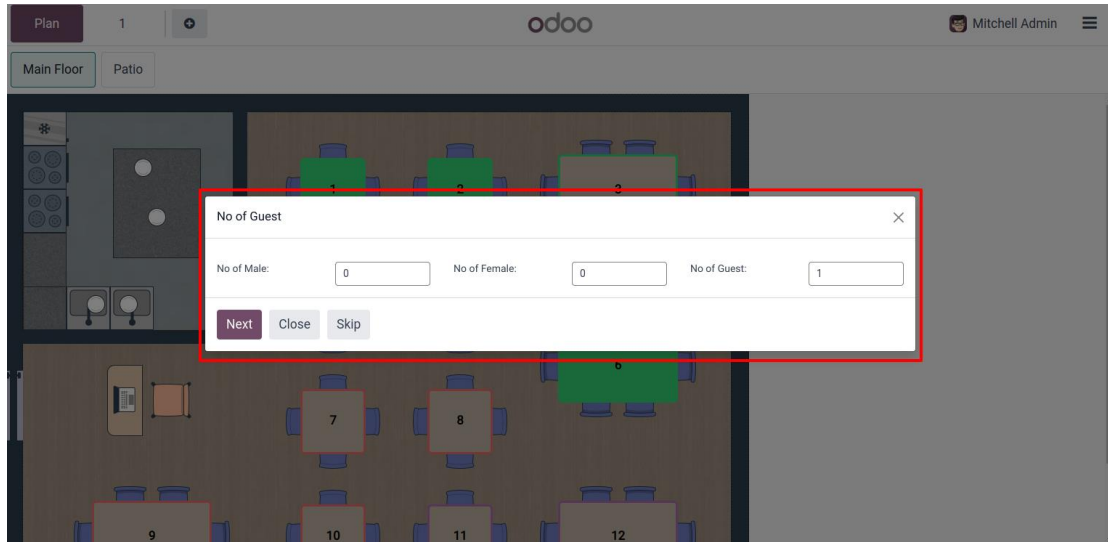

1. **Guest Details Timing**:
   This allows you to specify whether guest details should be collected **before placing the order** or **after placing the order**.

2. **Guest Details Required?**:
   This determines whether providing guest details is mandatory or optional.
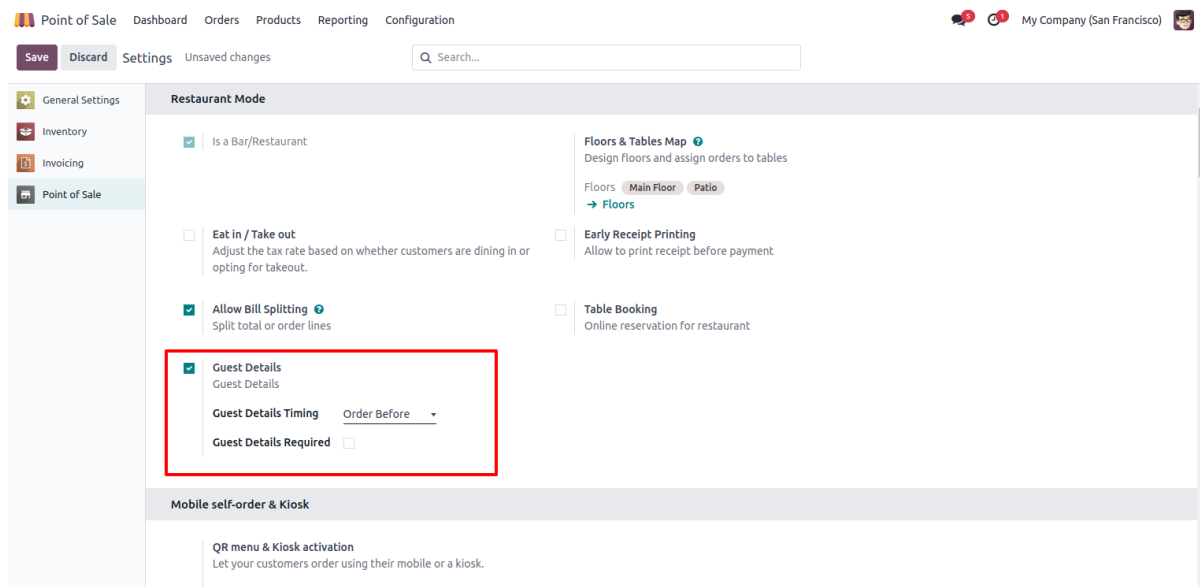

- In the **Order Before** option, guest details will be prompted when you select a table.

- In the **Order After** option, guest details will be prompted when you place the order.

- In previous popup, you can specify the **count of male and female guests**. Once you enter the count of male and female guests, another popup will appear displaying the **total count** based on your input.
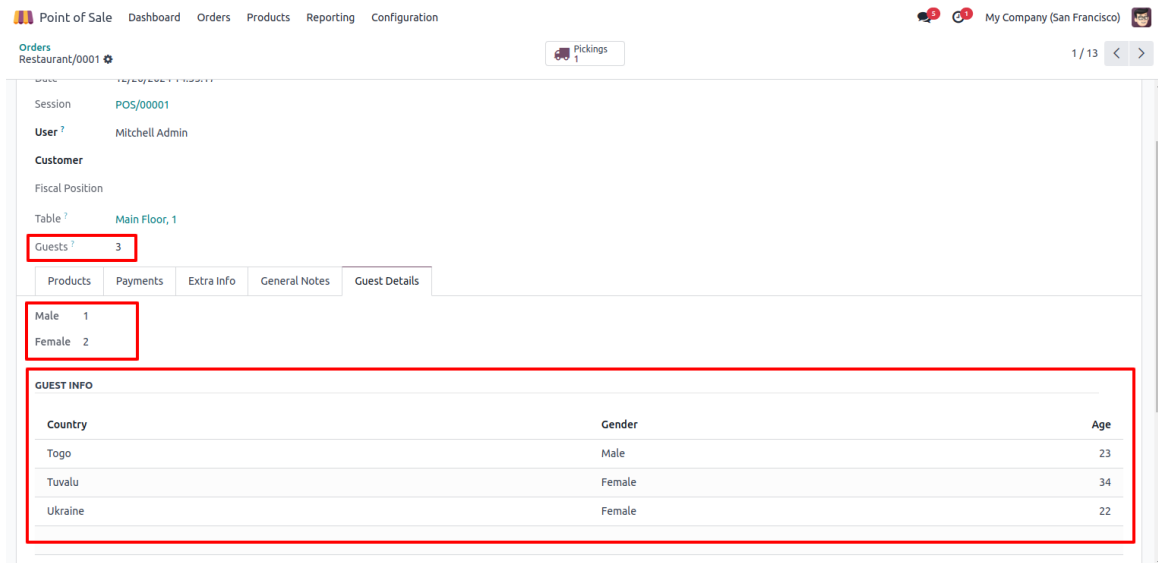

- After the order is validated, you can view the **total count of guests**, the number of **males**, **females**, and their **details** in the order summary.
