# Check Product & Location in Barcode

1. Go to App Section and Firstly Install The Module '`lod_check_pro_loc_dc`'.

**2. Open the Barcode App, and you will notice two newly added buttons:**

1. **Search Product & Location** – This button allows users to scan a barcode and retrieve details about the product along with its location.
2. **Batch Operations** – This button enables users to perform multiple barcode-related actions in a single process for improved efficiency.
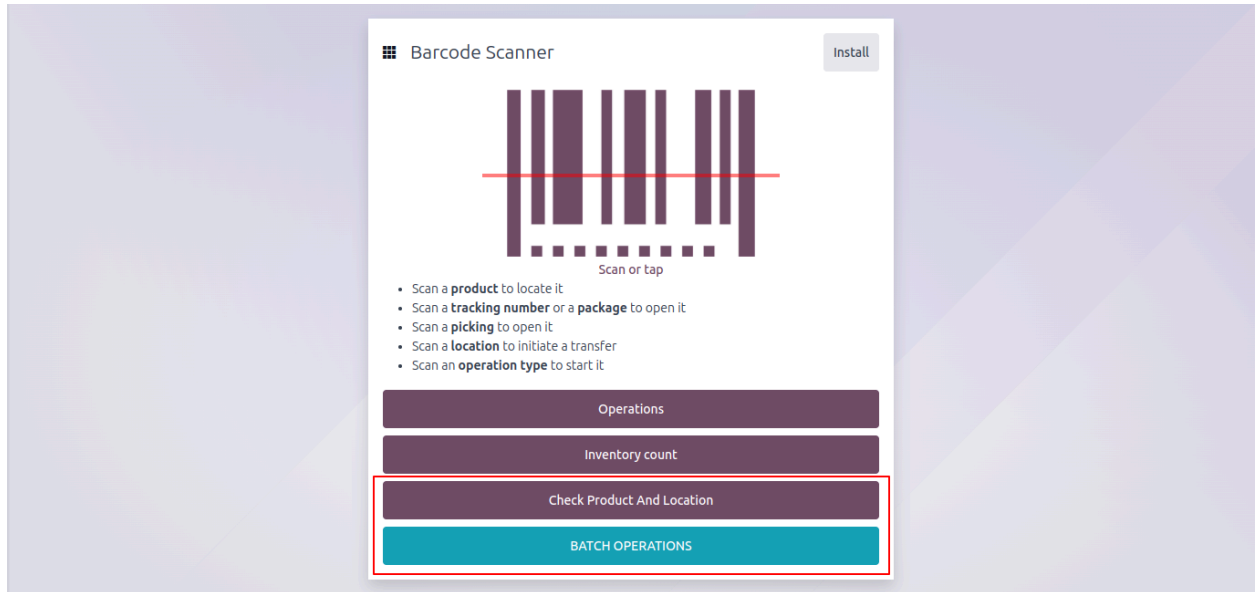

2.1.1 When you click on the *Check Product and Location* button, a barcode scanning window will appear (as shown in the image).

- This interface allows users to scan barcodes to retrieve detailed information about the product and its location quickly also with PDA devices.
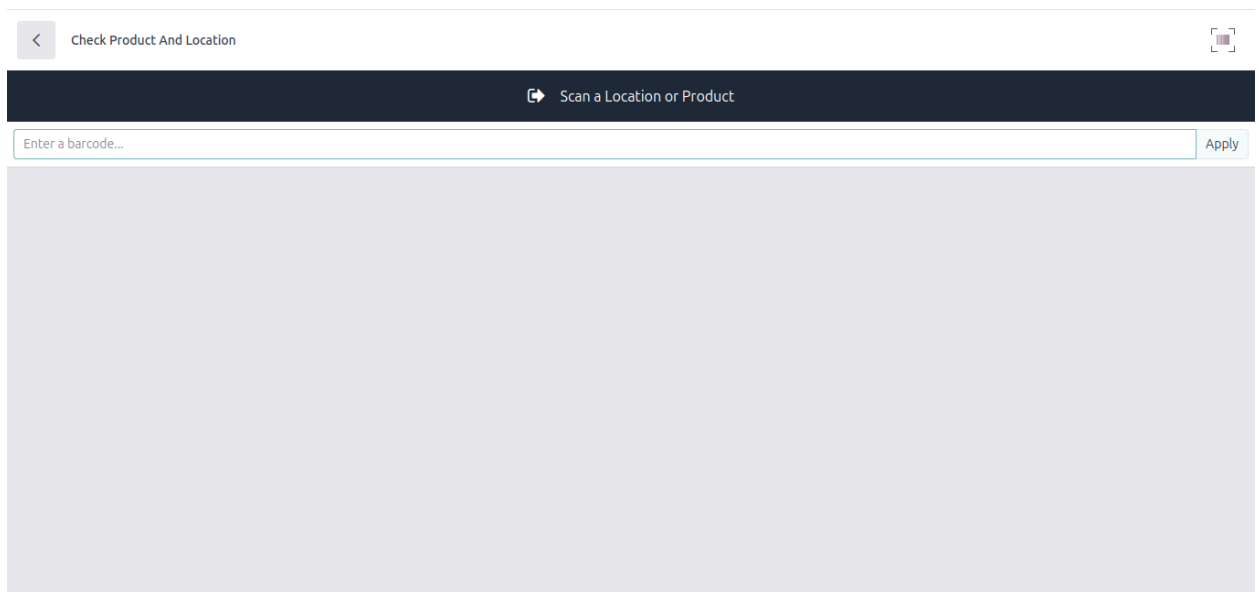

2.1.2 When we search for the product barcode *'8859313500194'* or we scan the product's barcode, the system will display the product's stock details across different locations. Each entry includes:

- **Location** – The specific warehouse or stock area (e.g., **WH/Stock, KHGNB/Stock**).
- **Product Name** – The name of the product (e.g., **Beerlao Can 330ml**).
- **Barcode** – The product's unique **barcode** identifier.
- **Quantity** – The available stock units at each **location**.
- **Pack Details** – Information about the product's **packaging**, if applicable.
- **Lot / Serial No** – Information about the product's **Lot / Serial No**, if applicable.
- **Owner Details** – Information about the product's stock **Owner**, if applicable.

2.2.1 When you click on the Batch Operations button, the system displays a list of available batches.

- You can perform actions on these batches, including *validate*, directly from this interface. This feature simplifies batch management and ensures efficient processing.
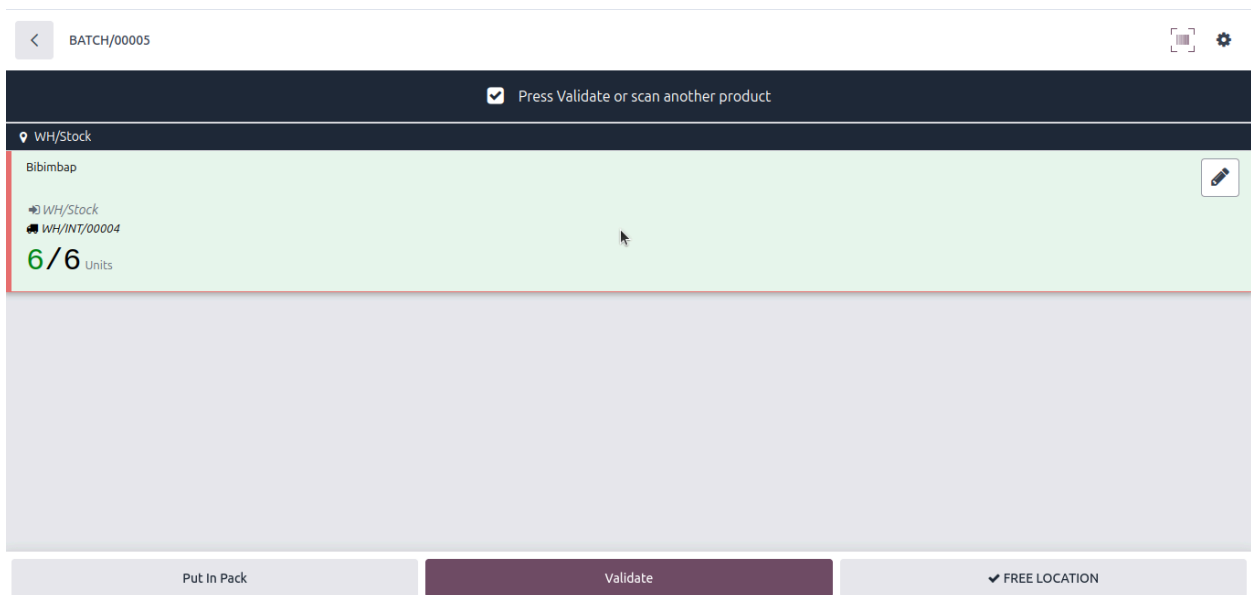

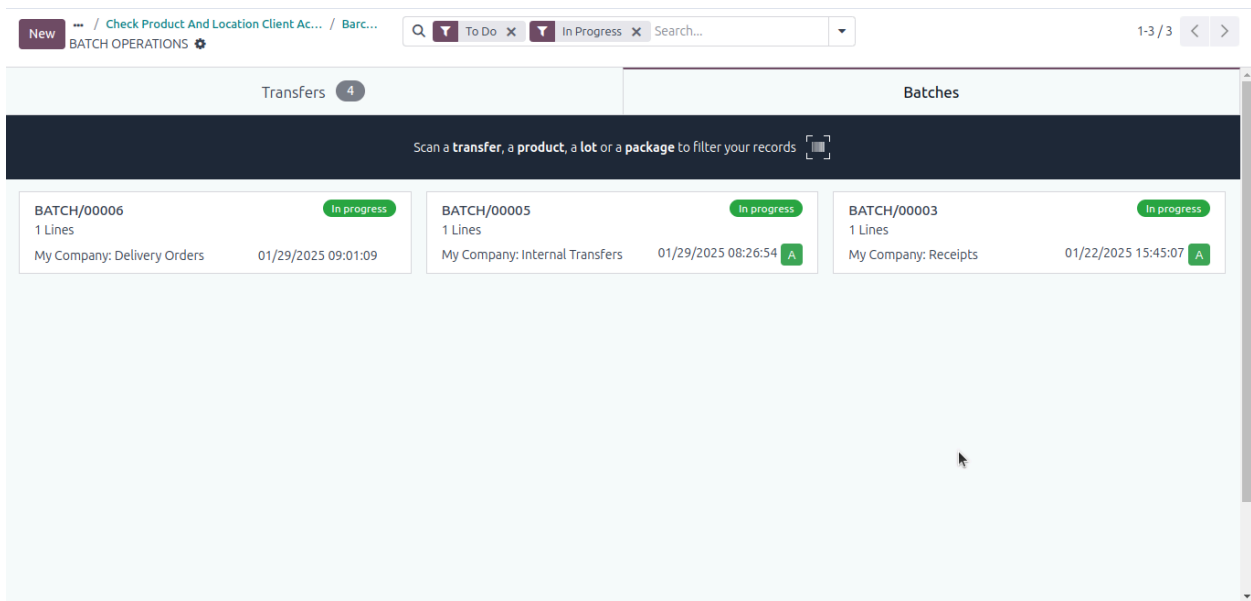

2.2.2 The "Free Location" button allows users to view and manage specific locations assigned to their user profile.

- When the Free Location button is clicked, a detailed list of all configured locations associated with the user's access rights is displayed. This includes internal, customer, vendor, and other virtual locations, as shown in the attached screenshots.

Each location entry includes:

- Location Name: The identifier of the location.
- Location Type: The classification (e.g., internal, customer, vendor).
- Additional Details: Other associated information such as whether the location is empty or part of a specific storage category.
